

Pease Repurposing Meeting- 2/15/2022

Question 1: What kind of educational opportunities are not being offered or supported district wide?

Math field trips - partnering with science centers, Bob Bullock Museum, Ransom Center, etc. various activities with navigation/calculations (MathHappens Foundation)

Civics laboratory

Interactive math museum

There doesn't seem to be a civics program currently offered within the district, based on the 'have it all' site - so that would seem to be a gap. I do see a few references to STEM programs.

There was a great garden at one point.

If there are creative options, potential partnerships - all non-profits/community colleges - higher ed options/business partnerships related to education should be allowed to submit a proposal

Elementary school

Question 2: What educational opportunities could be enhanced or made more widely accessible if located at Pease?

Question 3: What are some examples you've seen in other schools or neighborhoods, or in other cities altogether, to address similar challenges?

Question 4: How can we put this all together to envision a final solution to address the needs?

Maker Spaces - making math models that can help teach, teacher workshops, support for homeschool educators and programming with public libraries, offer materials for free, resources for teachers all year long, resources for parents, students, and adult learners
Early childhood coding isn't widely available to my knowledge and it's location near the downtown tech hub makes this interesting

The location of Pease would make a great social studies hall

Urban agriculture and gardening was incorporated at the site previously
